Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NO
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	NA
Login Credentials (Demo)	No Login required
Platform / Hosting Provider	Local(localhost)
Repository Link	Click To Access Github Repository Link
Demo Video Link	Click To Access Demo Link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Windows 10/11, macOS, or Linux
- Python 3.10 or above
- Git installed
- Visual Studio Code (recommended)
- Internet connection
- Required Python packages from requirements.txt

Step 1: Clone the repository:

```
git clone https://github.com/Somyacn/GenAi-Project.git
```

Step 2: Navigate to the project directory:

```
cd Personalized-Network-Assistant
```

Step 3: Navigate to the SkillWallet_GenAI directory:

```
cd SkillWallet_GenAI
```

Step 4: Install all required dependencies:

```
pip install -r requirements.txt
```

Step 5: Start the FastAPI backend server:

```
uvicorn main:app --reload
```

Step 6: Open a new terminal and start the Streamlit frontend:

```
streamlit run frontend/streamlit_app.py
```

Step 7: Access the application:

- Frontend (Streamlit UI): <http://localhost:8501>
- Backend API (Swagger Docs): <http://127.0.0.1:8000/docs>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Suggestions depend on the quality of user-provided event details.	Provide complete and accurate event information for better results.
2	Fact-checking accuracy depends on the availability of online information.	Verify critical information from trusted sources when required.
3	The application requires an active internet connection to use AI services.	Ensure a stable internet connection before running the application.
